DEVELOPING THE GAME OF CHESS USING NEW INTERNET CHESS PLATFORMS

Annotation: The article is devoted to the study of new opportunities for the development of chess using modern technologies with chess platforms.

Keywords:sport, chess, chess openings, FIDE, chess platforms.

Chess was invented in India, where it was known as ―chaturanga‖ until the end of the 6th century CE. This game is considered the ancestor of chess. Since then, it has changed many names, forms and rules. An interesting fact is that the first folding chessboard was invented by a priest in 1125 to hide his game from the church ban on gambling by making it look like the spines of books on a shelf [3].

Chess took on its modern form in 1475, when the rules were changed: the queen was allowed to move any number of squares, and the bishop was allowed to move diagonally instead of jumping. These changes sped up the game, and the ability of a

pawn to become the strongest piece gave players an additional incentive to fight to the end.

The new version of chess quickly gained popularity, and already in the 18th century, not only aristocrats but also ordinary people were interested in it, playing in specially equipped cafes.

Methods and organization of the research.

The presented research is based on existing programs, developments and methods used in domestic sports science. The study was conducted by collecting information on the problematic topic, systematizing the obtained data, analyzing, and also conducting a cognitive synthesis, as a result of which a conclusion and recommendations were drawn.

Research results and their discussion.

Chess was officially recognized as a sport in 1999 by the International Olympic Committee. Firstly, during this period, international tournaments and championships began to be actively held, which required unification of rules and organization of competitions at a professional level.

Secondly, in 1924, the International Chess Federation (FIDE) was founded, which played a key role in recognizing chess as a sport. In addition, recognizing chess as a sport simplified the organization of tournaments, attracting sponsors, and developing a professional chess community [2].

Today, chess is recognized as a sport more in 100 countries around the world.

An important step was the recognition of FIDE by the International Olympic Committee, which officially secured the status of chess as a non-Olympic sport [4].

In the late 1990s and early 2000s, with the growing popularity of the Internet and online games, electronic tournaments, or online tournaments, began to actively develop. But with the development of new technologies, many problems and restrictions, scammers and cheaters appeared. In order to win a sum of money, people changed, used hints, did not turn on cameras, downloaded viruses and much more.

Because of this cheats, many organizers refuse online tournaments, not wanting to invest their money and devalue the legendary game. However, people still believe

in the honesty and reputability of people, they try to install new security systems, complicate identification, connect artificial intelligence, etc.

Titled Tuesday [1] is a weekly tournament for titled chess players, which is held on Chess.com. Only titled chess players Grandmasters (GM), International Masters (IM),

FIDE Masters (FM) and National Masters (NM) can participate in the tournament, as the level of trust in them is much higher.

The tournament prize pool varies, but is typically $5,000, divided among several finalists. The winner of the tournament receives a significant portion of the prize pool, usually around $1,000.

Titled Tuesday event has many advantages such as:

- any chess player with an official title can participate, regardless of rating or age. This creates a unique opportunity for lesser-known masters to play with top chess legends;
- time control (3+1) makes the games fast, but deep enough for strategic thinking; - the tournament is actively broadcast on platforms like Twitch and YouTube, where famous chess players show their games or comment on the games of other participants.

Conclusions. Remote online tournaments are actively developing, new platforms are appearing for the comfort of players. Sports are evolving and giving beginners many chances and opportunities, because in online tournaments you can try your skills against Grandmasters, and also earn a cash prize.

Of course, there are also disadvantages in the form of loss of live communication and insufficient information support, fraud, but all these shortcomings are eliminated with the development and evolution in the world of innovative technologies.
